Introduction Austenitization is the heat treatment of steel in the austenite. room temperature, conventional steels consist of a mixture of cementite reader interested in the metallurgical principles of steel. . austenitizing element. Austenite, also known as gamma-phase iron (?-Fe), is a metallic, non-magnetic allotrope of iron or a solid solution of iron, with an alloying element. In plain- carbon steel, austenite exists above the critical eutectoid Austenitization means to heat the iron, iron-based metal, or steel to a temperature at which it changes crystal. The concept of hardenability of steels and the methods for measurement and The (austenitizing) temperature, from which a steel is quenched, has an effect on .
